

Book Homework Rubric

To ensure clear expectations and consistent scoring, I will be adopting the following rubric for scoring homework:

- Completeness (3 point maximum) Note: Attempts must include the problem statement, and enough detail to justify any conclusions (usually more than what is included in the solutions manual).
 - 0- Less than half of the problems are attempted
 - 1- At least half of problems are attempted, but less than 75%
 - 2- At least 75% of problems attempted, but not all.
 - 3- All problems attempted
- Correctness and Detail (6 point maximum)

These points will be distributed evenly amongst graded solutions on each assignment. Each solution will be evaluated based on the following criteria:

 - Correctness: Reaching the correct final conclusion is important, as is reaching it through correct computations or reasoning.
 - Organization and Syntax: Computations and explanations should be easy to follow, and use mathematical notation correctly and consistently.
 - Detail and Justification: Your solutions must include justifications for any steps that involve the application of theorems, results, rules, or named strategies from this course. When in doubt, it is a good practice to include all intermediate steps and justifications. Also, whenever reasonable, you must include the problem statement before starting of your solution.
- Following Submission Guidelines (see below) (1 point maximum)
 - 0- Guideline not followed.
 - 1- Guideline followed.

Submission Guidelines

Your submission must:

- be on time.
- include your name and the due date of the assignment in the upper left corner of the first page.
- be stapled (no folding together or use of other fasteners) in the upper left corner, whenever multiple pages are used.
- contain no tears, or spiral frills, or significant wrinkles or folds.
- be typed, or written in reasonably neat handwriting with reasonable spacing between lines and only include sparse use of the margins.
